EDUCATION

California State University, Northridge

Northridge, CA

Bachelor of Science in Computer Science

May 2025

Relevant Coursework: Data Structures and Algorithms, Machine Learning, Software Engineering, Computer Architecture, Operating Systems, Database Design, Object-Oriented Programming, Data Mining, Discrete Structures

TECHNICAL SKILLS

Languages: Python, Javascript, C#/C++, Typescript, Java, SQL (Postgres), Cypher (Neo4j), HTML/CSS

Developer Tools: Git, VS Code, Cursor, IntelliJ, Jupyter, Postman, Jira, PowerShell, Bash, Linux

Frameworks/Libraries: Flask, FastAPI, Node.js, Bootstrap, React, Next.js, LangChain, Docker

Concepts: Full-Stack Development, API Integration, Agile Methodology, RAG Systems, CI/CD Pipelines

EXPERIENCE

Systems Software Engineer

May 2025 – Present

Hyve Solutions

Fremont, CA

- Architected the development of a scalable AI-native test orchestration platform (Bootstrap, Flask, Neo4j) managing approximately 20k executions weekly and saving 1k+ manual hours for analysts, enabling teams to dynamically build, track, and analyze test coverage with AJAX-driven RESTful interactions
- Designed a graph-based data model in Neo4j capturing hierarchical relationships across entities, then implemented a GraphRAG system utilizing OpenAI's GPT-5 for test result analysis, test case generation, and inference over an extensive test case library, reducing manual reporting effort by 30%
- Extended the platform by enabling live SSH device management and a real-time terminal interface via Socket.IO and Unicorn/eventlet, supporting multi-customer server environments and enabling direct UUT test logging across VLAN-detected devices

Software Engineer Associate

October 2023 – May 2025

NASA's Autonomy Research Center (ARCS)

Northridge, CA

- Contributed to the development of a Smart Wheelchair by integrating autonomous navigation into a hybrid control scheme using state estimation and path planning, enhancing independence for users with low mobility
- Developed a Python script integrating real-time object detection and tracking using YOLOv8 and OpenCV, reducing obstacle detection latency by 50% and expanding navigable environment coverage.
- Validated system reliability through pre-deployment simulation in Gazebo (RViz) and comprehensive unit testing, reducing obstacle collision risk by 30% before hardware testing

PROJECTS

SyllabAI | ColorStack Winter Hackathon | Node.js, OpenAI API, Postman

January 2025

- Built an AI-powered academic assistant using Node.js and the OpenAI API that parses course syllabi and answers student questions with context-aware responses tied to deadlines, policies, and course structure
- Designed a query routing pipeline that preprocesses user input, injects relevant syllabus context into GPT prompts, and returns structured guidance, reducing average student responsiveness compared to manual syllabus review
- Enhanced user experience by designing an intuitive interface that facilitates easy access to student support resources and AI-generated advice

Rent-N-Run | Web Development | Spring Boot, PostgreSQL, Postman

February 2024 – May 2024

- Engineered a Spring Boot backend with RESTful APIs to handle client requests, implement CRUD operations, and integrate seamlessly with PostgreSQL for reliable data management.
- Designed maintainable controller logic and validated endpoints with automated API tests in Postman ensuring product reliability and improved performance.

LEADERSHIP & CAMPUS INVOLVEMENT

CSUN-NSBE Chapter (Vice-President) **CSUN ARCS** (Associate) **STEM Advantage** (Scholar/Alumni)
CodePath (Alumni) **ColorStack** (Contributor)
